

MODELS

API (mostly created by me)

- Item:**
 - GET all items
 - GET item by id
 - POST create item
 - POST update item by id
 - DELETE item by id
- User:**
 - POST register user
 - POST login
 - POST update session
 - GET session message
 - POST logout
- Photo:**
 - POST upload
- Category:**
 - GET category by id
 - POST create category by id
 - DELETE category by id
 - GET category by id

If we have time:

- POST share item by id (Owner)
- POST also found (User) by id
